

# Several night sky events to take in this month

**NEEL ROBERTS**  
*Sky's the Limit*

On Sunday, Jan. 10 look southwest after sundown and you'll see Venus, Pluto, Mercury, Saturn, Jupiter and Neptune in line. You'll need a telescope for Neptune and Pluto, but the other

planets can be seen without one.

On Thursday, Jan. 21 look west before 1:30 a.m. to see Mars and the moon set into the night.

On Friday, Jan. 29 look southeast before the sun rises to view Jupiter rise with the sun. You will need a good solar filter with binoculars or a telescope to see this.
