

# Sky watch for March

## ***NEEL ROBERTS***

The Zodiacal Light is a faint, roughly triangular, whitish glow seen in the night sky extended up from the vicinity of the sun along the ecliptic or zodiac. The best time to view it is for another week and a half after evening, in the west.

After sunset on Friday, March 19, Mars and a near crescent waxing moon will be around until the

early morning hours of March 20.

Saturday, March 20 marks the Spring Equinox.

Daylight Savings arrives on Sunday, March 14.

Visit <http://whatsouttonight.com/Resources/2021MarSky-WOT.pdf> to download this month's free sky chart.
