Journey to the Center of the Earth: yesterday's fiction or tomorrow's fact?

Neel Roberts

Oct 5, 2021

French author Jules G Verne wrote his famous novel “Voyage au centre de la Terre” aka “Journey to the Center of the Earth” in 1864 and had no idea how popular it would have become over 150 years later.

After three movies 1959 <https://m4ufree.fun/watch-io70-journey-to-the-center-of-the-earth-1959-movie-online-free-m4ufree.html>, 1988 <https://m4ufree.fun/watch-obt69-journey-to-the-center-of-the-earth-1988-movie-online-free-m4ufree.html>, 2008 <https://m4ufree.fun/watch-ft6-journey-to-the->

center-of-the-earth-2008-movie-online-free-m4ufree.html and several TV/cartoon versions, the idea has intrigued both sci-fi buffs and truthers.

Verne did pen a few other hits such as *Twenty Thousand Leagues Under the Sea*, *Around the World in Eighty Days*, *Five Weeks in a Balloon* and more but this was by far his most successful. I first got interested in the movie through the 1967 Spiderman episode "Menace from the Bottom of the World" <https://www.youtube.com/watch?v=BhkHcbJEFuU>. Between the idea of a whole civilization thousands of miles below with that funky San Francisco style psychedelic music in the background (some guy actually has all the old spidey tunes <https://www.youtube.com/channel/UCzTu-EiEsNcaIEglOwpe7kg!>), a young person's imagination run wild.

With the recent interest in the flat Earth, the conclusion is obviously fake news as it can be debunked empirically by climbing to a high altitude and use a visual aid to try and find the end of the Earth. Most can't even see the next neighbourhood let alone the next town, etc. yet the Moon, which is over 1/4 million miles away, is as clear as a bell?

However, I do agree that what we've believed the Earth to be is not the reality. Jan Lamprecht (<http://hollowplanets.com>), a South African computer scientist has given many compelling lectures <https://www.youtube.com/watch?v=Zb2xMtRxVgM> as to the logistical reasons why the Earth is hollow and he is by no means the first. Canadian author Marshall B Gardner wrote his renowned book "A Journey to the Earth's Interior; or, Have the Poles Really Been Discovered" http://www.auricmedia.net/wp-content/uploads/2015/01/A_Journey_to_the_Earth-Marschall_B.Gardner.pdf in 1920. This succeeded the work of astronomer Edmond Halley ("Halley's Comet" named after him) <http://www.dioi.org/kn/halleyhollow.htm>, physicist Isaac Newton http://www.echoesofenoch.com/ArchivedA/PDFs/A_Hollow_Earth.pdf and many more reputable scientists accepted by both the creationists and evolutionists.

I'm not a follower of <https://www.gaia.com>, but some of their articles are intriguing and their recent one on the subterranean civilization of Agartha <https://www.gaia.com/article/hollow-earth-theory-is-the-subterranean-civilization-of-agartha-real> is one of many cultures which has been spoken of for centuries.

There have many cave expeditions where explores find tunnels which seem to go on and on and are possible entrances to these societies <https://www.youtube.com/watch?v=5YXXEyU4Gqo>.

The US military have been using "Deep Underground Military Bases" (DUMBs) for decades and recently the maps which connect the country underground have been published <https://mindreach.net/t/dumbs-resources-deep-underground-military-bases/343>. Plus, there is much mystery about the North and South Pole.

American explorer Dr. Fredrick A. Cook claimed discovery of Bradley Land in 1908 while naval officer Robert E Peary Sr. sighted Crocker Land in 1909 both islands about 1,000 miles NW of Ellesmere Island, Canada https://en.wikipedia.org/wiki/Bradley_Land#/media/File:Bradley_Land.jpg. They are not on any maps today, so were these openings at the poles now blotted out?

Early maps of Antarctica from a few centuries ago show it ice free, so chances are it was not only inhabitable but another portal. This would support Admiral Richard E Byrd's claim of the Nazi's UFO space program he witnessed in 1947 in "Operation High Jump" <https://www.bibliotecapleyades.net/antarctica/antartica11.htm>. There's just too much to even get started but someone put together a wonderful 45-minute documentary <https://www.youtube.com/watch?v=oSsQEY8Vz6w&t=2004s> well worth watching to get started. With our planet in a historic awakening stage and the public conscious rising, I believe the time is right to reintroduce the hollow Earth concepts as they are ripe for discovery and public disclosure. The best is yet to come!

Sky watch for the next month: Download this month's sky free chart at <http://whatsouttonight.com/Resources/2021OctSkyWOT.pdf>

1Comet SOHO 342P- Monday October 18th before sunrise around 8:00 am you can catch this naked eye event. The tail should be visible for at least an hour before and with a good solar filter, you can see it after sunrise.

2Zodiacal Light- Did you catch this last month? It's a faint, roughly triangular, whitish glow seen in the night sky extended up from the vicinity of the sun along the ecliptic or zodiac. Best time is from Sunday, October 03rd for 2 weeks in the East before dawn.

3Orionids Meteor Shower Peaks- Wednesday, October 21st 1-2 hours before dawn just to the north of constellation Orion's bright star Betelgeuse. With the second-fastest entry velocity of the annual showers at 10-20 per hour, meteors from the Orionids produce yellow and green colors and have been known to produce an odd fireball but the near full Moon will not help.

4Draconid Meteor Shower Peaks- Friday, October 08th best seen after twilight facing NNW high up. While not as dramatic as other showers it can occasionally spew hundreds an hour. Fortunately, the waning gibbous moon will not rise until mid-to-late evening, providing a few to several hours of dark sky, starting at nightfall.

Happy Fall and cooler days!

Letter to the Editor

Alta. Medical Association Section of Emergency Medicine extremely concerned

Editor:

Dear People of Alberta, On behalf of the approximately 450 emergency physicians across the province, we feel compelled to add our voice to the increasing calls and pleas for an immediate firebreak to reduce the spread of COVID-19 across our province.

Simply put, our system is on the verge of collapse. Throughout the entire acute care system our team members and colleagues have continued to give more and more. They have performed heroic efforts to expand capacity, but their efforts are not infinite, and expansion of critical care beds cannot continue endlessly.

Our healthcare system has taken drastic measures to do everything we can: operating our ICU capacity on a provincial basis, cancellation of scheduled surgeries for more than three consecutive weeks, stretching our nursing workloads to the absolute extreme, and caring for extremely sick Albertans in more and more

non-traditional environments. We have reached maximal efforts that can be added. If the raging fire of infectious

COVID-19 cases is not met with a meaningful and effective firebreak, our system will be overwhelmed and cease to be effective for ALL Albertans - whether they suffer from COVID-19 related severe outcomes or not.

Those of us who work on the frontlines of the health care system will continue to show up every day and will continue to work our hardest to care for every single Albertan in need. If you or a loved one are ill or in pain, you should still seek care at your nearest emergency department. We are here for you.

Our team of skilled allied health care professionals are doing our absolute best in these extraordinary times, but we need your help. We need every Albertan to continue to mask, to avoid mass gatherings, to get vaccinated, and most importantly to add their voices to call on the government to implement an immediate firebreak.

We understand that implementing province wide public health restrictions should be a last resort measure, used only in the direst of times. As we face the largest wave of COVID-19 infections ever seen in our province during this pandemic, we cannot understate how dire the times have become. Our

health care system is on the verge of being pushed over the edge of the cliff. There have been concerns raised that restrictions will only punish those who have already done their part, but it is important to emphasize that the absence of a functional acute care medical system will impact every Albertan in the most drastic of ways. At the absolute extreme, it could mean life or death for many Albertans.

Some province wide restrictions have been implemented by our government. Unfortunately, they are currently easy to circumvent and are not being supported by any meaningful enforcement. As the number of COVID-19 cases continues to increase, and as our government

insists on a watch and wait approach, the entire medical profession is sending out an SOS. Physicians of every specialty are pleading for an immediate firebreak. We need help to preserve safe and timely acute care delivery for all Albertans. Please call on government to take action. As Albertans,

we're all doing our best. It's time they do the same.

The time to act is now. Dire times call for drastic measures.

*Dr. Paul Parks
