

Close Encounters of the Fifth Kind

NEEL ROBERTS
Sky's the Limit

Dr. Stephen M. Greer (siriusdisclosure.com) is a physician and UFO researcher, and his latest documentary “Close Encounters of the Fifth Kind; Contact has Begun” was released in April 2020.

Greer features whistleblowers and scientific experts who claim they’ve had face-to-face encounters with extraterrestrial visitors.

While I am not a fan of transcendental meditation, they believe this is helpful in manifesting the encounters.

You can check out the movie for free at anddrawyourown.com and draw your own conclusion, but I do agree disclosure is closer than we think.

SKY WATCH

Download this month’s sky free chart at skynews.ca/canada-night-sky-july-august-2020.

The annual Perseids meteor shower runs until Aug. 24 with the peak from Wednesday, Aug. 12 to Thursday, Aug. 13. To view, face the northeast in the constellation of Perseids. The best time to see the meteor shower is between 11 p.m. and dawn.

On Saturday, Aug. 15, look east before sunrise to see the conjunction of a crescent moon and Venus.

On Friday, Aug. 28 before sunset, Jupiter and Saturn will be close to the moon. If you have a good telescope, you can actually see the rings of Saturn, which is a treat!

This is an excellent month to view the Milky Way – and without freezing. The best time to view our home galaxy this month is after 11 p.m. until dawn.
